

XM Satellite Radio has been a welcome change to my listening experience while driving. It offers many more options than the regular Top 40 that my local broadcasting does. It is also available no matter where I travel to. Taking away the kind of programming satellite radio offers will be a grave mistake. Since 9/11 many people have opted for road travel rather than flying. Since satellite radio can be broadcast across the United States, it offers a pleasant drive to the consumer. With it's recent addition of local weather and traffic, it also offers the consumer a "heads-up" on what is happening on the road. Local radio often does not come in clear enough until one is right up on the city and situation. Take it from someone who knows, XM Satellite Radio is well worth the money I spend!! Please reject the NAB's Petition 04-160 and support satellite radio's ability to provide the kind of programming that we demand and deserve!
